Cheat Sheet

Nested Conditional Statements

Nested Conditions

The conditional block inside another if/else conditional block is called as ***nested conditional block***.
In the below example, *Block 2* is nested conditional block and *condition B* is called nested conditional statement.

Code

PYTHON

```
matches_won = int(input())
goals = int(input())
if matches_won > 8:
    if goals > 20:
        print("Hurray")
    print("Winner")
```

Input

```
10
22
```

Output

```
Hurray
Winner
```

Input

```
10
18
```

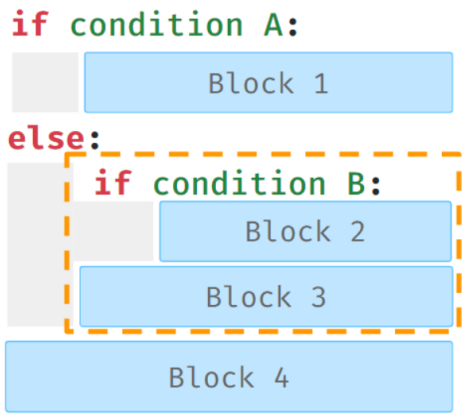

Output

```
Winner
```

Nested Condition in Else Block

We can also write nested conditions in Else Statement.

In the below example *Block 2* is a nested conditional block.

Code

```python
a = 2
b = 3
c = 1
is_a_greatest = (a > b) and (a > c)
if is_a_greatest:
    print(a)
else:
    is_b_greatest = (b > c)
    if is_b_greatest:
        print(b)
```

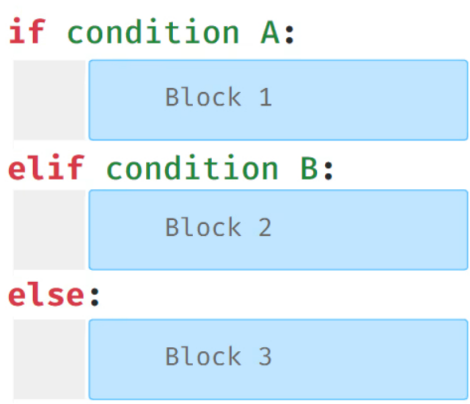

Output

```
3
```

Elif Statement

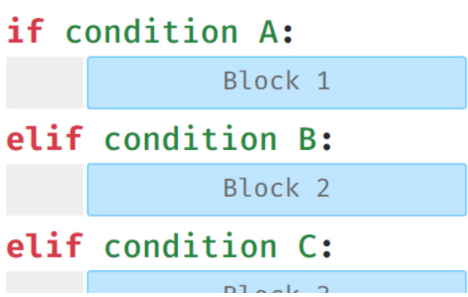

Use the elif statement to have multiple conditional statements between if and else.

The elif statement is optional.

Multiple Elif Statements

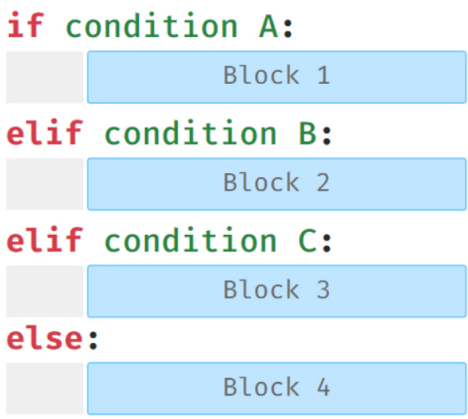

We can add any number of `elif` statements after `if` conditional block.

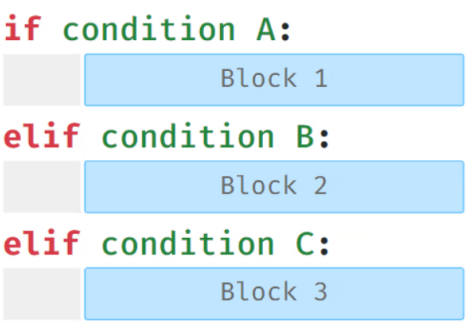

Execution of Elif Statement

Python will execute the elif block whose expression evaluates to true.
If multiple `elif` conditions are true, then only the first elif block which is True will be executed.

Optional Else Statement

Else statement is not compulsory after `if - elif` statements.

Code

PYTHON

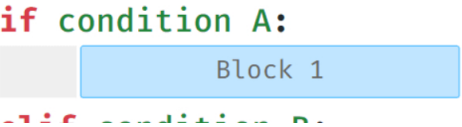

```python
number = 5
is_divisible_by_10 = (number % 10 == 0)
is_divisible_by_5 = (number % 5 == 0)
if is_divisible_by_10:
    print("Divisible by 10")
elif is_divisible_by_5:
    print("Divisible by 5")
else:
    print("Not Divisible by 10 or 5")
```

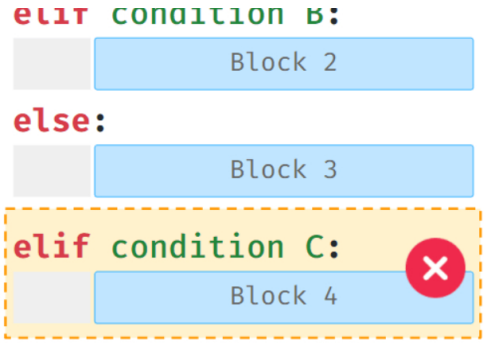

Output

```
Divisible by 5
```

Possible Mistake

Cannot write an elif statement after `else` statement.
